

March 14th, 2022

The Honorable Patrick Leahy
Chairman, Committee on Appropriations
United States Senate
Washington, D.C. 20510

The Honorable Richard Shelby
Vice Chairman, Committee on Appropriations
United States Senate
Washington, D.C. 20510

The Honorable Tammy Baldwin
Chair, Subcommittee on Agriculture,
Rural Development, Food and Drug
Administration, and Related Agencies
Committee on Appropriations
United States Senate
Washington, DC 20510

The Honorable John Hoeven
Ranking Member, Subcommittee on Agriculture
Rural Development, Food and Drug
Administration, and Related Agencies
Committee on Appropriations
United State Senate
Washington, D.C. 20510

Dear Chairman Leahy, Vice Chairman Shelby, Chair Baldwin and Ranking Member Hoeven:

Wildlife causes more than \$12.8 billion in damage each year to natural resources, public infrastructures, private property and agriculture. USDA Wildlife Services (WS) works to prevent, minimize or manage this damage and to protect human health and safety from conflicts with wildlife. Wildlife damage to U.S. livestock, aquaculture, small grains, fruits, vegetables and other agricultural products has been estimated to reach nearly \$1 billion annually. Wildlife predators cause more than \$232 million in death loss to livestock; field crop losses due to wildlife total \$619 million annually; losses to vegetables, fruits and nuts total \$146 million annually; and 70% of catfish farmers incur wildlife-related damage resulting in losses of \$6 to \$12 million annually from double-crested cormorants in Mississippi alone. As a result, WS is an essential program to U.S. agriculture.

WS assists farmers and ranchers in 50 states and 2 territories to reduce the impact of predators on their animals, protecting 4.5 million head of cattle, 3.4 million head of sheep, and 550,000 head of other livestock in 375,000 direct control actions. In FY 2021, WS provided more than 20,500 technical assistance activities that enabled 44,115 livestock producers to implement improved husbandry and methods such as use of guard animals, exclusion, fencing, and predator dispersal. These activities included 31 predator management workshops attended by more than 1,200 individuals from 10 states, dispersal of more than 200,000 double-crested cormorants, removal of 7,900 cormorants at aquaculture facilities in 29 states to protect farmed fish from avian depredation. The industry is worth \$1.5 billion nationally (per National Marine Fisheries Service).

In this unique year, WS supported USDA's Animal Plant Health Inspection Services' emergency response efforts to animal diseases, natural disasters, hazardous spills, and wildfires. WS deployed 44 personnel on 55 deployments assisting with the COVID-19 National Vaccination Campaign. WS collaborated and coordinated with the USGS, CDC, VS and State agencies and deployed employees to respond to COVID-19 outbreaks in domestic mink, sampling 265 animals from 14 different species. WS responded to African Swine Fever detection in Puerto Rico and the Dominican Republic and assisted the USFS in a New Mexico wildfire response. The National Wildlife Disease Program (NWDP) also coordinated sample collection and evaluation of many other disease in wildlife to include SARS-CoV-2, plague, tularemia, avian botulism, canine distemper, hantavirus, leptospirosis, rabies, and salmonellosis.

In collaboration with State wildlife agencies, the U.S. Fish and Wildlife Service (USFWS), and Tribes, WS addresses livestock depredation and protect human health/safety related to wolves and grizzly bears. WS manages conflicts with gray wolves in 7 states. WS conducted operations with grizzly bears in

3 states, dispersing 59, capturing-relocating 15, and lethally removing 6. Congressional funding of \$1.38 million supported protecting livestock from large carnivore predation in 13 states using nonlethal strategies such as range riding, fladry installation, and electric fence building. WS filled 17 full-time positions and supported more than 20 other positions in 11 states to implement these strategies. WS' National Wildlife Research Center evaluated the effectiveness of activities to reduce depredation.

In FY21 alone, WS conducted more than 72,000 technical assistance projects to reduce wildlife damage to property in urban, suburban and rural locations across the country, which include: homes, schools, industrial facilities, roads, bridges, airports and airport runways, dams and electrical and water systems. In addition, WS works to protect wetlands habitat, riparian habitat, tidal marsh and timber from a variety of pest species including feral hogs and nutria, as well as the destruction that beaver can cause. Through cooperator-funded beaver damage management on more than 9,600 sites in 40 states, WS worked to protect roads, bridges, timber, agriculture, property, and native habitat and other natural resources from flooding damage.

Protection of natural resources is a growing need. WS has invested resources in conservation of game species including mule deer, bighorn sheep, antelope and waterfowl in eight states. In FY21, WS selected 34 projects in 12 states - in cooperation with the Natural Resources Conservation Service under the latest Farm Bill - focusing on specific problem populations, while continuing work to reduce feral swine damage on approximately 188 million acres in 37 states and 3 territories. WS had more than 3,500 cooperative agreements including, agriculture, forestry, private industry, state wildlife agencies, state departments of health, state departments of agriculture, schools, universities, counties, local governments, Tribal governments, homeowner associations, conservation groups and others that together with WS, mitigate the damage and dangers that wildlife can inflict.

WS flew 67 aircraft for 15,536 flight hours over a total of 1.21 million miles of low-level flight operations to conduct livestock protection via predator removal, removal of invasive feral swine and brown treesnakes, aerial delivery of vaccine baits (rabies), emergency response, and other missions.

WS processed more than 14,600 strikes with civil aircraft with more than 10,000 strikes with military aircraft also reported. More than 255,000 wildlife strikes with civil aviation have been reported to the National Wildlife Strike Database for civil aviation since WS began keeping records in 1990. Reported wildlife-aircraft strikes continue to increase as airport managers and biologists prioritize reporting all wildlife strikes to the FAA database. Damaging strikes have decreased as a result of wildlife mitigation and awareness efforts at airfields. WS provided 316 staff years of direct support to assist a total of 784 civil, military, and joint-use airports including about 72% of all U.S. commercial passenger airports. WS trained 5,056 airport and military personnel, to prevent wildlife from colliding with aircraft, improving travel safety. WS also provided direct staff support to reduce aviation hazards at 142 U.S. or coalition military airbases stateside and in southwest Asia, the Pacific Rim, Africa, Europe, and in the British Indian Ocean Territory plus at 103 civil-military airports protecting American military aviation assets and personnel.

It has been WS's cooperative nature that has allowed it to accomplish all of the above listed programs and has made it the most cost effective and efficient program in the federal government in the areas of wildlife damage management and public health and safety.

Chairman Leahy, Vice Chairman Shelby, Chair Baldwin and Ranking Member Hoeven we appreciate your demonstrated leadership and strong support of this essential program. Our organizations are committed to working with you to strengthen WS resources and to ensure a continued federal partnership in the responsible management of our nation's wildlife.
